

Reliability Engineer

Feb. 2019 – Dec.2022

Oudenaarde - Belgium

My profile - Industrial

Feb. 2019 – Dec.2022: Reliability Engineer (ASIC) – Onsemi, Belgium

Hardware Development responsibilities:

- Hardware development for burn-in stress qualification (HTOL&HAST) boards.
- Interfacing ASIC products with microcontroller for stress tests.
- Test chip boards development.

Product qualification responsibilities:

- Qualification plans for industrial applications, based on AEC-Q100 standards.
- Evaluating and data drift analyzing for products qualification data.
- Root cause analysis, corrective actions and the 8D report for customers.

Qualified products:

- Battery management: NCS35011, NCS35040
- Interfaces: NCN5130
- Motor control: NCV70517, NCV70514

HTOL
Board

My profile - Industrial

Hardware Development responsibilities:

- Hardware development for burn-in (HTOL&HAST) boards.

HTOL
Board

My profile - Industrial

- Interfacing ASIC products with microcontroller for stress tests.
- Qualification plans for applications - AEC-Q100 standards.

My profile - Industrial

- Failures Examples:

**Electromigration
voids & hillocks
(SEM)**

**Ion migration
between
terminals [Short-
circuit failure of
the IC]**

My profile - Industrial

- Failures Examples:

Wire bond failure

Delamination (Package/Die) Interface
